

Network Services

Review, validate, evaluate the performance of your industrial network.

How healthy is your network?

Data from the factory floor is vital to making informed business decisions, improving productivity, and increasing return on assets. NHP and Rockwell Automation can offer expertise to assist with development and maintenance of your fully integrated communications network with the speed, volume and other operational capabilities required of today's more sophisticated and complex industrial automation and control environments.

Reduce Project Costs

Network architecture evaluation to ensure networks are designed to meet current and future needs.

Evaluate Your Existing Network

Get an accurate picture of your existing system, the first step to a healthy network.

Improve Productivity

Increase network availability and uptime by ensuring production, application and control system stability.

Evaluation Services To Suit Your Needs

Baseline & Performance, Health Check, Validation, Repair and Troubleshooting.
