

Training Workstation

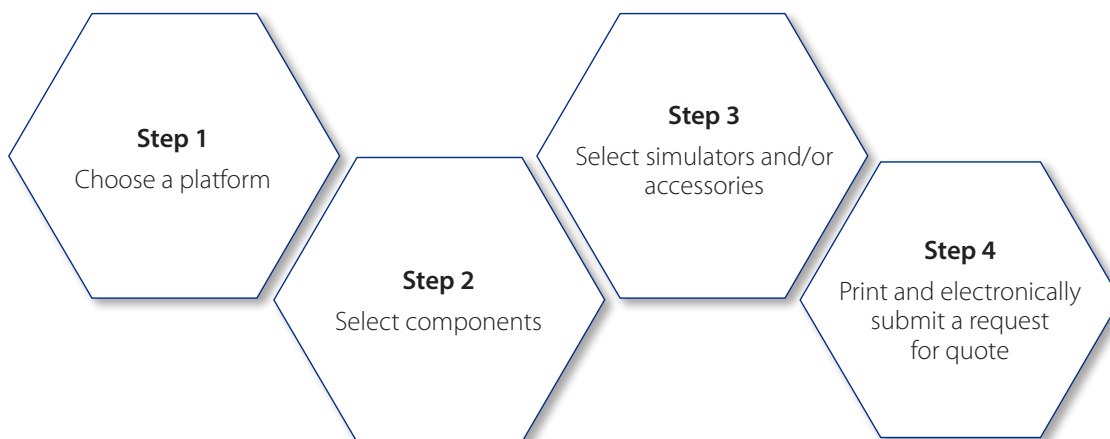

Maintain and enhance your skills with a workstation designed to simulate the same control schemes on your plant

The Training workstation offers a means to simulate the same control schemes running throughout your plant. This workstation can help you perform sequential or process control. It will help enhance productivity with access to advanced diagnostics and symbolic programming. Whether you want to extend your staff's engineering skills or develop an effective program to get employees up to speed, the Training workstation will help you get the most from your investment.

The Rockwell Automation Workstation Builder is an online training workstation quotation tool.

The Workstation Builder allows you to choose a workstation and select your own components, simulation and accessories. Your workstation specifications are then submitted and a quotation will be responded to by NHP.

Select your ideal Training Workstation in 4 easy steps:
