

Save time money and space with NHPs new switched neutral RCBO

The Past

The Future

20% cost saving*
30% space saving*
Off the shelf solution

Two panelboards both with 30 protected circuits

NHP's new DIN-SAFE switched neutral RCBO is half the size (18mm) of traditional switched neutral RCBOs (36mm). The new DIN-SAFE **DSRCBSxx30CAN** suits either panelboard busbar chassis or busbar comb. The new RCBO not only saves space due to its size but allows standard of the shelf panelboards with a 3 pole chassis to be utilised. No more waiting for expensive 4P special chassis. The benefits extend to not having to pre-plan which circuits are RCD protected or not as the standard 3 poles chassis caters for both RCBOs and regular 1P, 2P or 3P MCBs.
